## Current situation

Sep. 2021 **Leonardo S.P.A.**, Genoa

### Software Security Architect

I use to study and implement security mechanisms for **critical infrastructures**.

Currently, I'm working on the data protection systems of a customer. In particular, I've been involved in the **analysis of its security requirements and in the solutions integration**. These includes centralized **anti-malware systems, two factor authentication, HSM** as well as make all the **network traffic encrypted**.

## Experience

Sep. 2018 – Sep. 2021. **Horsa Devlab**, Genoa

### Full-Stack Web Developer

Assigned to develop management applications both **Front-end** and **Back-end**.

The software I was working on deals with the management of orders, stocks, products, tests and specifications of a pharmaceutical industry. The application uses **Angular** for client-side interface management and **.NET Core** for server-side API management using the ASP.NET MVC pattern. The system relies on a **SQL Server** database.

From this experience I've learned how World Wide Web really works in depth and I've improved a lot my programming skills.
